

Vocabulary Flashcards

Stimulus (Stimuli)

something (or more than one thing) that causes a reaction or memory

Chemical Input

a chemical that stimulates our nerves

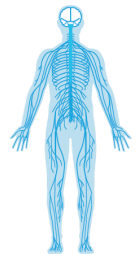

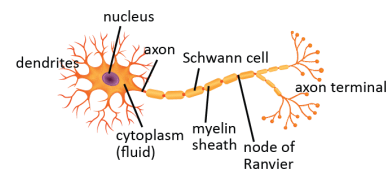

Sensory Organs

organs such as eyes, ears, tongue, skin, nose

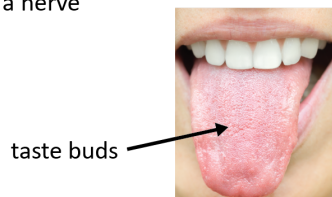

Neuron

a type of cell that captures information and moves it to another place

Receptor

small parts of the receptor organ that transfer stimuli to a nerve

Response

an action performed in response to a situation, event, or stimulus

Memory

a long-term storage of an event or thing in the brain

Neural Pathway

stimulus \Rightarrow sensory nerve \Rightarrow spinal cord \Rightarrow brain \Rightarrow motor nerve \Rightarrow response
